

How to measure for a new deck

When there is an existing deck

Measurements Requested:

- Length and width of existing deck, stairs and landings
- Measurements pertaining to any desired expansion
- Distance from the deck height to the ground where the stairs land

Photos Requested:

- Large shot of entire back of house
- Straight on shot of wall looking at the deck area
- Angled shot of left side of yard looking at deck area
- Angled shot of right side of yard looking at deck area
- Any other shot you might deem important to us (the more the better)

Most Important! – Keep this simple

We do not expect you to hire a surveyor to prepare a drawing. Do the best you can with what you have. We employ professional designers that are experienced in scaling photos to estimate measurements.

We will always **confirm measurements on site** prior to beginning construction.

Good photos are the biggest help. If you are taking digital pictures you **do not** need to print them out. Bring the camera or phone you used and we will handle it from there.

Use the back of this sheet for your drawing
