

How to measure for a pergola

Measurements Requested:

- Length and width of existing deck or patio
- Location of doors and windows along the back of the house
- If there is a roof overhang:
 - Distance from patio height to underside of soffit
 - Projection of soffit and gutter (how far does it stick out)
 - Distance between top of windows and doors to underside of soffit

Photos Requested:

- Large shot of entire back of house
- Straight on shot of wall looking at the pergola area
- Angled shot from yard looking at pergola area
- Any other shot you might deem important to us (the more the better)

Most Important! – Keep this simple

We do not expect you to hire a surveyor to prepare a drawing. Do the best you can with what you have. We employ professional designers that are experienced in scaling photos to estimate measurements.

We will always **confirm measurements on site** prior to beginning construction.

Good photos are the biggest help. If you are taking digital pictures you **do not** need to print them out. Bring the camera or phone you used and we will handle it from there.

Use the back of this sheet for your drawing
